Sustainable Refurbishment of Building Facades and External Walls 2009 - 2011

SUSREF will develop new sustainable concepts and technologies for the refurbishment of building facades and external walls.

The main objectives are:

COOPERATION

- to identify the volumes of needs of refurbish in the EU and in neighbouring areas and evaluate the meaning of this in terms of environmental and economic impact and business potential;
- to develop technologies for refurbishment considering different conditions and requirements and analyse these from the view point of building physics, comfort and energy efficiency.
- to assess and ensure the sustainability of the developed technologies
- to deliver sets of relevant performance specifications for sustainable refurbishment;
- to disseminate the results for building industry, standardisation bodies, and policy-makers and authorities in terms of technological knowledge, guidelines and recommendations.
